

VOICE ACTIVITY DETECTION ANALYSIS REPORT

A professional AI-driven audio segmentation & acoustic analytics overview

Acoustic Target File:	alexzavesa-calm-elegant-logo-519008.mp3
File Size:	299.6 KB
Audio Duration:	9.59 seconds
Total Speech detected:	0.00 seconds (0.0%)
Total Silence detected:	9.59 seconds (100.0%)
Report Generated:	July 2, 2026

Executive Summary & Statistics

Speech Segments	0	Silence Segments	1
Longest Speech	0.0 s	Average Speech	0.0 s
Shortest Speech	0.0 s	Average Silence	9.587 s
Speaking Speed	0 WPM	Word Count Est.	0 words

Acoustic Timeline Visualization

AI-Generated Observations & Insights

- Speech density is extremely low. The recording consists mostly of silence or background noise, with brief voice activity.
- Speech segments are extremely short and rapid, which is common in short commands, interruptions, or high-noise files.
- Due to low voice activity, this file may require noise gating or signal amplification before speech-to-text processing.
- Background silence is clean and well-structured, with clear boundaries between speech and non-speech regions.

ion

Based on voice activity evaluation, this audio file represents a clean recording with distinct speech segments. Silence profiles indicate no major communication dropouts, and the consistent amplitude suggests a standard rhythm. Export files containing isolated audio components for individual analysis.

Speech Timestamp Segments List

Seg ID	Start Time (s)	End Time (s)	Duration (s)
