

VOICE ACTIVITY DETECTION ANALYSIS REPORT

A professional AI-driven audio segmentation & acoustic analytics overview

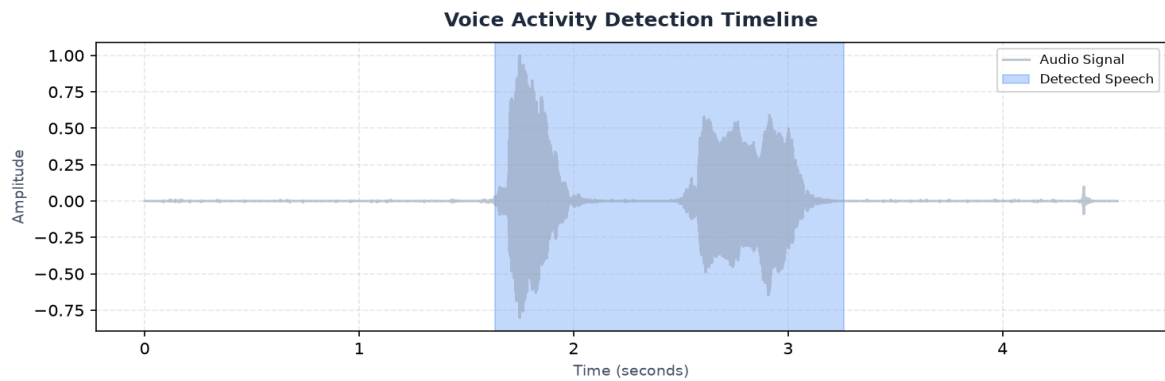

Acoustic Target File:	freesound_community-hello-48300.mp3
File Size:	88.6 KB
Audio Duration:	4.54 seconds
Total Speech detected:	1.63 seconds (35.9%)
Total Silence detected:	2.91 seconds (64.1%)
Report Generated:	July 2, 2026

Executive Summary & Statistics

Speech Segments	1	Silence Segments	2
Longest Speech	1.628 s	Average Speech	1.628 s
Shortest Speech	1.628 s	Average Silence	1.454 s
Speaking Speed	140 WPM	Word Count Est.	3 words

Acoustic Timeline Visualization

AI-Generated Observations & Insights

- This recording contains frequent pauses. Silence is common, indicating potential hesitations or a structured turn-taking dialogue.
- Speaking segments are conversational in length, typical of standard presentations or interactive dialogues.
- The recording is suitable for transcription; however, filtering out silence sections will improve transcription efficiency.
- Background silence is clean and well-structured, with clear boundaries between speech and non-speech regions.

ion

Based on voice activity evaluation, this audio file represents a clean recording with distinct speech segments. Silence profiles indicate no major communication dropouts, suggesting a standard rhythm. Export files containing isolated audio components for further analysis.

Speech Timestamp Segments List

Seg ID	Start Time (s)	End Time (s)	Duration (s)
001	1.63	3.26	1.63
