

VOICE ACTIVITY DETECTION ANALYSIS REPORT

A professional AI-driven audio segmentation & acoustic analytics overview

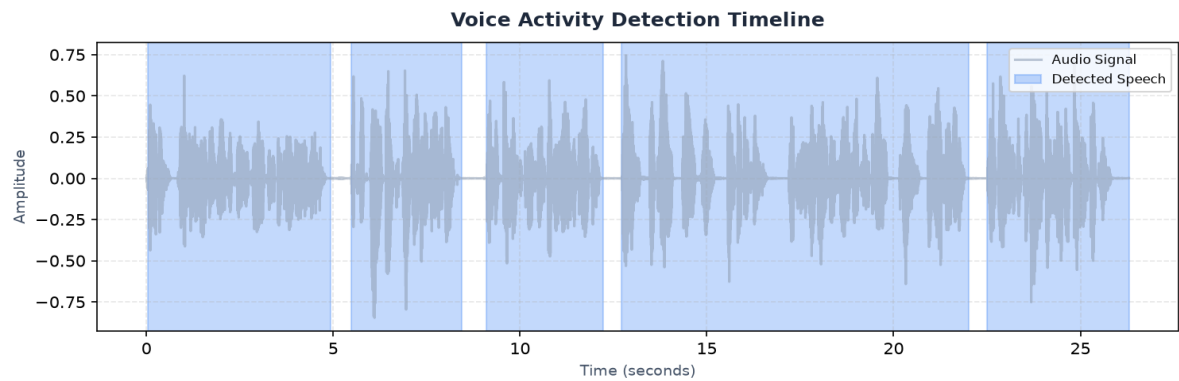

Acoustic Target File:	voice-sample.wav
File Size:	2.2 MB
Audio Duration:	26.30 seconds
Total Speech detected:	24.11 seconds (91.7%)
Total Silence detected:	2.19 seconds (8.3%)
Report Generated:	July 2, 2026

Executive Summary & Statistics

Speech Segments	5	Silence Segments	5
Longest Speech	9.308 s	Average Speech	4.821 s
Shortest Speech	2.972 s	Average Silence	0.439 s
Speaking Speed	140 WPM	Word Count Est.	56 words

Acoustic Timeline Visualization

AI-Generated Observations & Insights

- Speech density is exceptionally high. The speaker talks continuously with minimal pause time.
- Speaking segments are conversational in length, typical of standard presentations or interactive dialogues.
- The speaker moves quickly between thoughts, with minimal pause time. The flow is fast-paced.
- The recording has a strong speech signal and is highly suitable for automated Speech-to-Text transcription.
- Background silence is clean and well-structured, with clear boundaries between speech and non-speech regions.

ion

Based on voice activity evaluation, this audio file represents a clean recording with clear speech segments. Silence profiles indicate no major communication dropouts, suggesting a standard rhythm. Export files containing isolated audio components are available individually.

Speech Timestamp Segments List

Seg ID	Start Time (s)	End Time (s)	Duration (s)
001	0.03	4.93	4.89
002	5.47	8.45	2.97
003	9.09	12.22	3.13
004	12.71	22.01	9.31
005	22.50	26.30	3.80
