

VOICE ACTIVITY DETECTION ANALYSIS REPORT

A professional AI-driven audio segmentation & acoustic analytics overview

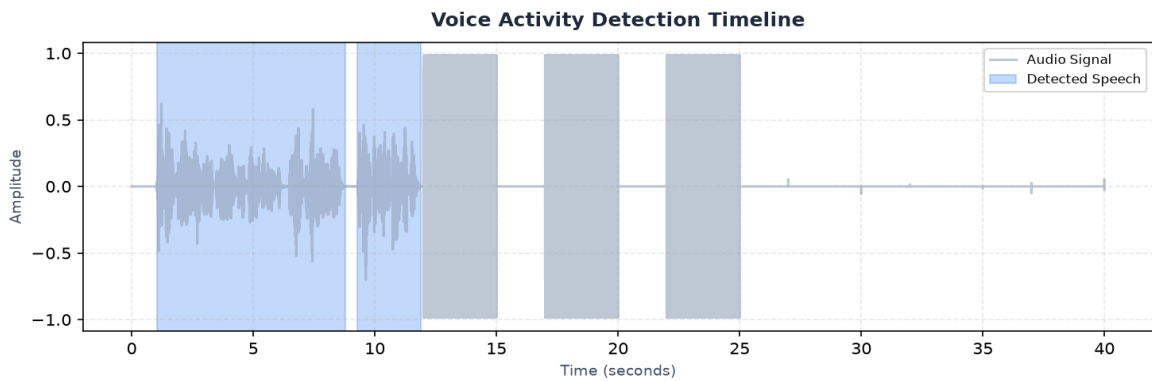

Acoustic Target File:	pure-tone.wav
File Size:	3.4 MB
Audio Duration:	40.00 seconds
Total Speech detected:	10.39 seconds (26.0%)
Total Silence detected:	29.61 seconds (74.0%)
Report Generated:	July 2, 2026

Executive Summary & Statistics

Speech Segments	2	Silence Segments	3
Longest Speech	7.772 s	Average Speech	5.196 s
Shortest Speech	2.62 s	Average Silence	9.869 s
Speaking Speed	140 WPM	Word Count Est.	24 words

Acoustic Timeline Visualization

AI-Generated Observations & Insights

- This recording contains frequent pauses. Silence is common, indicating potential hesitations or a structured turn-taking dialogue.
- Long uninterrupted speech segments indicate a monologue, lecture, or single-speaker narrative style.
- Pauses between speech are long. This structure is typical of Q&A; sessions, language learning exercises, or dictated text.
- The recording is suitable for transcription; however, filtering out silence sections will improve transcription efficiency.
- Background silence is clean and well-structured, with clear boundaries between speech and non-speech regions.

ion

Based on voice activity evaluation, this audio file represents a clean recording with distinct speech segments. Silence profiles indicate no major communication dropouts, suggesting a standard rhythm. Export files containing isolated audio components for analysis individually.

Speech Timestamp Segments List

Seg ID	Start Time (s)	End Time (s)	Duration (s)
001	1.03	8.80	7.77
002	9.28	11.90	2.62
