

VOICE ACTIVITY DETECTION ANALYSIS REPORT

A professional AI-driven audio segmentation & acoustic analytics overview

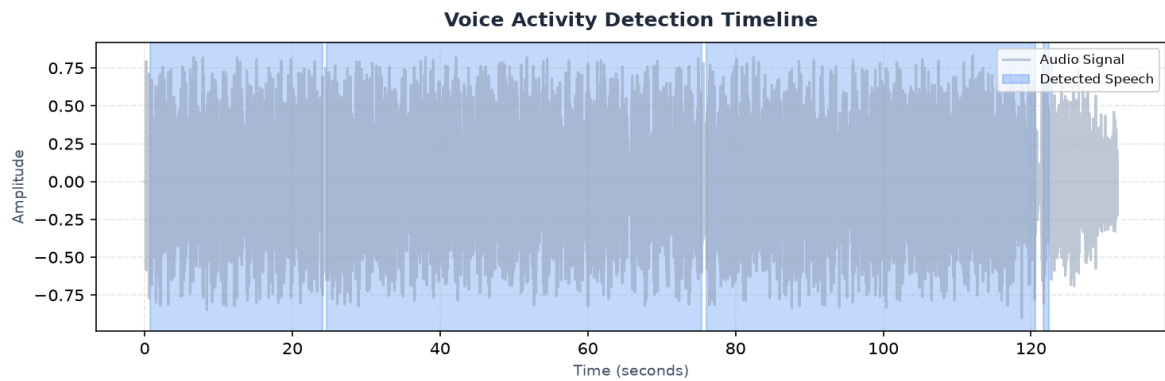

Acoustic Target File:	fd9f68de-6f17-498f-9e68-2edf49163c59.mp3
File Size:	4.0 MB
Audio Duration:	131.71 seconds
Total Speech detected:	119.50 seconds (90.7%)
Total Silence detected:	12.21 seconds (9.3%)
Report Generated:	July 2, 2026

Executive Summary & Statistics

Speech Segments	4	Silence Segments	5
Longest Speech	50.78 s	Average Speech	29.876 s
Shortest Speech	0.828 s	Average Silence	2.441 s
Speaking Speed	140 WPM	Word Count Est.	278 words

Acoustic Timeline Visualization

AI-Generated Observations & Insights

- Speech density is exceptionally high. The speaker talks continuously with minimal pause time.
- Long uninterrupted speech segments indicate a monologue, lecture, or single-speaker narrative style.
- The recording is suitable for transcription; however, filtering out silence sections will improve transcription efficiency.
- Background silence is clean and well-structured, with clear boundaries between speech and non-speech regions.

ion

Based on voice activity evaluation, this audio file represents a clean recording with clear speech segments. Silence profiles indicate no major communication dropouts, suggesting a standard rhythm. Export files containing isolated audio components individually.

Speech Timestamp Segments List

Seg ID	Start Time (s)	End Time (s)	Duration (s)
001	0.77	24.09	23.32
002	24.67	75.45	50.78
003	76.07	120.64	44.57
004	121.63	122.46	0.83
